

## netForensics Profile

### Our Pedigree

Founded in 1999, netForensics is based on a culture of excellence and innovation – comprised of leading experts who understand the ever-evolving security threat and compliance needs of today's organizations. Since our early days as the pioneers of Security Information Management (SIM), we have delivered reliable, innovative products that security and business managers stake their careers on every day. From the largest government agencies and companies running complex networks, to small and mid-tier businesses, customers across the globe rely on netForensics to cost-effectively see and eliminate threats, secure valuable assets and solve pressing compliance challenges.

**In short: See. Secure. Solve.**

### nFX One Security and Compliance Management Solutions

With nFX One security information and log management products, netForensics delivers the most well-engineered security compliance management solutions available today: powerful, scalable and flexible. From real-time threat identification and mitigation to log management and audit readiness, netForensics is renowned for providing solutions that help organizations take control of security, operations and compliance. Our patented, award-winning technologies tie together silos of data to obtain a complete, understandable picture of network security and compliance posture. By centralizing huge volumes of data – from the perimeter to the core of the network – and delivering the right security information into the right hands at the right time, nFX One solutions dramatically improve your organization's ability to identify and rapidly respond to threats. Companies can finally gain an effective, proactive approach to protecting critical data and ensuring compliance with regulatory mandates and corporate policies.

### SIM: Size Does Matter

With the nFX One products – SIM One and Cinxi One – netForensics delivers a whole new breadth and depth of security intelligence, regardless of organizational size, type, or budget. Unlike other SIM or Log Management vendors, netForensics will not force an overly expensive SIM with more horsepower than you need – or try to ineffectively scale a basic log management solution to fit the needs of a complex, distributed environment. We are the only SIM vendor that has a complete line of solutions to effectively address your specific needs, from both a performance and cost perspective. We believe that no matter how large or small your network, you should not have to make a choice between being secure and being compliant.

### nFX SIM One™ – Enterprise-class Security Information Management

nFX SIM One, the industry's most robust Security Information Management software solution, transforms volumes of disparate, security-related data into actionable intelligence. Built on a highly-scalable n-Tier architecture, SIM One enables large organizations and managed service providers with complex networks to centrally gather, analyze, and accurately report on security events and risk posture. By identifying and enabling a rapid response to threats and providing an auditable compliance framework, SIM One helps protect valuable data and address a myriad of regulatory challenges.

### nFX Cinxi One™ – Flexible, Powerful and Affordable SIM and Log Management Appliances

The nFX Cinxi One family of appliances combine security monitoring and log management to provide organizations of all sizes with an easy, cost-effective means to address data protection and compliance challenges. Particularly well-suited for companies with budgetary and resource constraints, Cinxi One combines today's essential security technologies in a single, high-performance solution that is simple to deploy and use, yet only a fraction of the cost of other solutions.

## Managed Service Provider Solutions: Leveraging Security to Gain New Revenue Streams, Reduce Costs and Improve Customer Retention

As the only SIEM provider with a proven track record for successful delivery to Managed Service Providers (MSPs), netForensics has a deep understanding of the MSP sector – enabling them to create and deliver compelling and highly-effective security packages. For 10 years, netForensics has helped some of the world's largest MSPs remain competitive and successfully meet customer demands for addressing growing compliance requirements. nFX One solutions provide MSPs with a means to deliver real-time security analysis of external and internal threats. We help MSPs of all sizes to leverage their existing security infrastructure and expand their service offerings to grow revenue, enhance customer service and retention, and experience rapid return on technology investments

### nFX SOC One™ – A Partnership for Security Services Growth

nFX SOC One provides MSPs with business strategies, operational processes, and service designs necessary to grow and effectively support a security services portfolio. Combining best practice frameworks, proven methodologies and years of security services expertise, netForensics helps MSPs plan and implement a security service strategy that aligns with key business objectives. With varying levels of service options, SOC One can be tailored as an end-to-end SOC development engagement, or simply help rapidly deliver a new security offering to market.

### nFXperts™ – Security and Compliance Expertise

The deployment and support of effective technology can often require a service component. With nFXpert services, netForensics offers experienced and responsive security and compliance expertise to help clients maximize their return on investment in our security compliance solutions. nFXpert services deliver the processes, best practices, tools and training required to address existing skill and knowledge gaps – creating an effective security management and compliance infrastructure.

### Secure Alliance Partners

To meet customer requirements for a secure and compliant environment, netForensics also delivers solutions through select world-class systems integrators, consulting firms, and VARs. These Secure Alliance Partners have a solid track record for deploying multi-vendor security infrastructures. They offer a deep understanding

of security, compliance, policy, and risk management solutions for enterprise and government organizations, and they meet netForensics' strict standards for responsive customer care. Key netForensics partnerships include Cisco, HP and AT&T – as well as numerous resellers and integrators around the globe

### netForensics Customers

netForensics serves hundreds of customers worldwide – representing over a million devices under management, processing billions of events daily. netForensics' customers range from the largest government agencies and companies running complex networks, to mid-size businesses in need of security monitoring.
